The Wick Poetry Center is thrilled to bring the [Poets for Science](#) project with Jane Hirshfield to the AGU annual meeting in San Francisco, December 11-15. A global community supporting more than half a million advocates and professionals in the Earth and space sciences, AGU will convene 25,000 scientists from 100 countries in person this year to explore the theme: Wide. Open. Science.

We are grateful to partner with the AGU Science & Society Art & Science track and the editors of the new anthology, [Dear Human at the Edge of Time: Poems on Climate Change in the United States](#), to create a community poem inspired by a selection of poems from the anthology. This new poetry collection has been published in conjunction with the recently released [Fifth National Climate Assessment](#). You can also respond to the Art x Climate visual pieces published in the report or create your own erasure poem using the words from the NCA itself.

Visit [Dear Human](#) to share your voice in addressing climate change and explore how the intersection of science and art can foster creativity, innovation, and discovery.

Additionally, join us at the Exploratorium on Thursday, December 14, 6-10 pm for conversation and artworks dedicated to the power of art to communicate and inspire action on climate change. Learn more about this event presented by the US Global Change Research Program and the Exploratorium [here](#):
